#### DESIGNED TO COMBINE COMPACTNESS WITH STRENGTH.

Dimensions meet the requirements of tooling standards NF ISO 1711-1 and aerospace standard SAE AS 954G.

#### FEATURES AND BENEFITS

The 440 Pro Series was designed to ensure maximum user safety. When critical tightening torques are reached, the spanner is distorted gradually so no brutal breaking likely to injure the user. Tightening torques guaranteed significantly above specifications of strength tooling and bolting standards ISO 898-1 (quality class 12.9).

The Open End of Sidchrome 440 Spanners feature the ANTISLIP design - a locking groove prevents slippage and knuckle injury.

Features on the Ring End of the spanner - contact is concentrated on the flats of the fastener, not the corners. This provides greater torque and makes tightening easier.

Increased strength and more torque - the tensioning load is spread over a larger surface area.

One side of the ring is parallel to the shank - this allows you to locate on a smaller section of the fastener.

# WIN **SIDCHROME** *project* **CAR**

## **vw kombi edition**

We're breathing life into a '71 Bay Window Kombi and once she's finished one lucky winner will drive her away. Starting life as a white camper fitted with a Dormobile Pop top we saved this rare model from a slow death dragging her home and waking her from a state of slumber late last year. The brakes were seized, but the body didn't look bad and the engine turned over so we knew we were on a good thing. We'd found the base for the 'Kombi Edition' of the SIDCHROME Project Car build.

Next the planning started. Concepts were developed and the build planned. Our vision was to make something cool that would ensure the winner would become the envy of all their mates. As long term supporters of the automotive facility at the Chisholm Institute in Dandenong, it was a no brainer to get the guys and girls down there who are completing their Certificate III In Vehicle Body Repair and Light Vehicle Refinishing involved in the build. We stripped her down, sent her out for sandblasting before the students at TAFE got their chance to start work. We were lucky, there wasn't too much

damage, just 40 years of carpark dents. With a number of inner panels, the front end of any Kombi is a rust trap and this one was no exception. The students at TAFE fabricated repairs panels, replaced the battery tray and smooth out the body.

Of course every project car needs a performance injection and the team at the Australian VW Performance Centre will be treating the bus to a 170hp mill as well as going through the suspension, brakes and driveline. We have got some pretty cool plans for the interior including a massive moon roof and a SIDCHROME Cooler. You can follow the project car build via our Facebook & YouTube pages and we have also got the guys and girls from Street Machine to document the build from start to finish.

Don't forget you can WIN the SIDCHROME Project Car 'Kombi Edition' just by purchasing any SIDCHROME Tool, and entering your details at [winwithsidchrome.com.au](http://winwithsidchrome.com.au)
